Computer Forensics and Electronic Data Discovery Are Critical Security Tools For All Companies

Because even the best security can be breached, computer security professionals have brought scientific methods to the aid of businesses trying to resolve serious problems. Computer Forensics and Electronic Data Discovery is about the investigation of desktop computers, laptops, servers and whole networks that have been used to perpetrate a crime or been the target of such activity.

Digital Barracuda's iSEC Forensic Team provides discovery, evidence collection and expert testimony. We treat every case with professionalism and integrity—as if the evidence would be required to hold up in court. Our expertise ranges from file recovery, employee sabotage and misconduct, and corporate espionage to finding the source of Denial of Service attacks, preparing evidence for criminal prosecution of hackers and cyber thieves and discovering incriminating evidence on home-based computers. And we have the strength of a full-service systems integration and information security firm behind us.

Companies

*Your ability to act quickly
and decisively to security
incidents can be the
difference between
success and lost
customers...*

Protect Your Company's Reputation Your ability to act quickly and decisively to security incidents can be the difference between success and lost customers, damaged reputation and the inability to take legal action. The world's largest corporations have long used Computer Forensics to resolve security breaches. Now every company can do the same.

Build an Incident Response Team While companies only pay for our services when required, today every organization should have a plan for handling a critical security breach. That includes establishing an in-house Incident Response Team that knows exactly what to do when a problem arises. Every employee should understand that the company's first steps—even before the Forensic team arrives—are critical to stopping illegal activity and preserving the evidence. A simple mistake could destroy key evidence or do even greater harm to the compromised systems.

Digital Barracuda's Computer Forensic professionals will work with you to identify the right people (management and staff) for your Incident Response Team. We will train them in proper procedures and teach them to spot the warning signs of trouble early. Finally, we'll help you draft an incident response policy so that when security is breached everyone will know exactly what to do.

Call a Forensics Professional When an incident occurs, and after your team has safeguarded the scene, call Digital Barracuda's Forensic Team for quick response, professional evidence handling and rapid resolution. We will dispatch a forensics investigation team to your site immediately.

The DBiSEC Incident Response Team:

- Includes Digital Barracuda senior management
- Retrieves deleted files or partial files
- Identifies the source of a threat or problem
- Builds the case (civil or criminal)
- Has the skills, tools and experience to identify, extract, preserve and document computer evidence
- Observes certified chain of custody procedures for all evidence
- Responds quickly
- Works closely with law enforcement agents and legal counsel
- Applies professionalism and integrity to every investigation
- Gets systems operational again as quickly as possible, first performing a thorough vulnerability remediation to keep the problem from returning
